ACCELEROMETERS FOR HEALTH & USAGE MONITORING SYSTEMS (HUMS)
Health and Usage Monitoring Systems (HUMS) are gaining wide acceptance as an effective predictive maintenance strategy for helicopter gearboxes and drive train, gas turbine engines and some fixed wing aircraft. Due to the large number of critical flight safety systems on aircraft, particularly rotating systems on helicopters, vibration monitoring technology is effective in detecting and thus preventing catastrophic mechanical failures. Accelerometers used in HUMS typically have specialized requirements for performance, reliability, and packaging, depending on the particular aircraft and standards involved.

Manufactured in our AS9100:2016 QMS Certified by DQS, Inc. facility, this brochure showcases our ICP® and charge output accelerometers in several hermetically sealed configurations. While this sensor family represents a sampling of solutions used for this critical application, advanced design capabilities permit PCB to customize solutions specific to your requirements. Please inquire to learn which solution is right for your application.
