

Repair and Maintenance

PCB guarantees Total Customer Satisfaction through its “Lifetime Warranty Plus” on all Platinum Stock Products sold by PCB and through its limited warranties on all other PCB Stock, Standard and Special products. Due to the sophisticated nature of our sensors and associated instrumentation, **field servicing and repair is not recommended and, if attempted, will void the factory warranty.**

Beyond routine calibration and battery replacements where applicable, our products require no user maintenance. Clean electrical connectors, housings, and mounting surfaces with solutions and techniques that will not harm the material of construction. Observe caution when using liquids near devices that are not hermetically sealed. Such devices should only be wiped with a dampened cloth—never saturated or submerged.

In the event that equipment becomes damaged or ceases to operate, our Application Engineers are here to support your troubleshooting efforts 24 hours a day, 7 days a week. Call or email with model and serial number as well as a brief description of the problem.

Calibration

Routine calibration of sensors and associated instrumentation is necessary to maintain measurement accuracy. We recommend calibrating on an annual basis, after exposure to any extreme environmental influence, or prior to any critical test.

PCB Piezotronics is an ISO-9001 certified company whose calibration services are accredited by A2LA to ISO/IEC 17025, with full traceability to SI through N.I.S.T. In addition to our standard calibration services, we also offer specialized tests, including: sensitivity at elevated or cryogenic temperatures, phase response, extended high or low frequency response, extended range, leak testing, hydrostatic pressure testing, and others. For more information, contact your local PCB Piezotronics distributor, sales representative, or factory customer service representative.

Returning Equipment

If factory repair is required, our representatives will provide you with a Return Material Authorization (RMA) number, which we use to reference any information you have already provided and expedite the repair process. This number should be clearly marked on the outside of all returned package(s) and on any packing list(s) accompanying the shipment.

Safety Considerations

This product is intended for use by qualified personnel who recognize shock hazards and are familiar with the precautions required to avoid injury. While our equipment is designed with user safety in mind, the protection provided by the equipment may be impaired if equipment is used in a manner not specified by this manual.

Discontinue use and contact our 24-Hour Sensorline if:

- Assistance is needed to safely operate equipment
- Damage is visible or suspected
- Equipment fails or malfunctions

For complete equipment ratings, refer to the enclosed specification sheet for your product.

Definition of Terms and Symbols

The following symbols may be used in this manual:

DANGER

Indicates an immediate hazardous situation, which, if not avoided, may result in death or serious injury.

**CAUTION**

Refers to hazards that could damage the instrument.

**NOTE**

Indicates tips, recommendations and important information. The notes simplify processes and contain additional information on particular operating steps.

The following symbols may be found on the equipment described in this manual:

This symbol on the unit indicates that high voltage may be present. Use standard safety precautions to avoid personal contact with this voltage.

This symbol on the unit indicates that the user should refer to the operating instructions located in the manual.

This symbol indicates safety, earth ground.

	problems in direct-coupled charge amplifiers. To solve this problem, the user must AC couple (capacitor) the charge amplifier to the sensor/cable system.
Assembling	The 176 Series pressure sensor have a hermetically sealed Nickle Alloy (e.g. INCO) and/or stainless steel housing (e.g. 304L). There are (2) versions available: sealed integral cable or integral connector (no hardline cable). The sensors do not require any assembly. Only mounting to the machine being monitored using standard mounting accessories.
Dismantling	Other than removal from the mounting, there is no disassembly of the sensor required to take it out of service.
Maintenance	Routine maintenance, such as the cleaning of electrical connectors, housings, and mounting surfaces with solutions and techniques that will not harm the physical material of construction, is acceptable.
Servicing	Due to the sophisticated nature of the sensors and associated instrumentation provided by PCB Piezotronics, user servicing or repair is not recommended and, if attempted, may void the factory warranty. However, routine calibration of sensors and associated instrumentation is recommended as this helps build confidence in measurement accuracy and acquired data.
Repair	In the event that equipment becomes damaged or ceases to operate, arrangements should be made to return the equipment to PCB Piezotronics for repair. User servicing or repair is not recommended and, if attempted, may void the factory warranty.
Installation	<p>Overview: Sensor must be mounted in order to be put into service. When choosing a mounting method, consider closely both the advantages and disadvantages of each technique. Characteristics like location, ruggedness, amplitude range, accessibility, temperature, and portability are extremely critical. However, the most important and often overlooked consideration is the effect the mounting technique has on the high-frequency performance of the pressure sensor. Mounting methods include: Recess Mount or Flush Mount.</p> <p>Cabling: Care and attention to cable attachment is essential, as the reliability and accuracy of your system is no better than that of the output cable. First, check that you have ordered the correct cable type. As with sensors, no cable can satisfy all applications. Special low-noise cabling shielded twisted pair should be used with high-impedance, charge output devices.</p> <p>Plug the connector on the cable into the mating connector on the sensor. Then, holding the sensor stationary, secure the connector in place by tightening down the attached cable sleeve.</p> <p>Route the cable to a charge amplifier or in-line charge converter, making certain to strain relieve the sensor/cable connection and minimize motion by clamping the cable at regular intervals. Common sense must be used to avoid physical damage and minimize electrical noise. Avoid routing cables near high voltage wires. Do not route cables along floors or walkways where they may be stepped on or become contaminated. Shielded cable should have the shield grounded at one end only.</p>
Adjustment	The sensor is a sealed device and no user adjustments are possible. However, routine calibration of sensors by the manufacturer is recommended as this helps build confidence in measurement accuracy and acquired data.
Danger Areas (for pressure-relief devices)	N/A – not a pressure relief device.
Training Instructions	Industrial sensors must be installed in Hazardous Locations by trained professionals according to EN/IEC 60079-14 requirements.
Details on Safety of Protection Category	Ex ia is “intrinsic safety”, which limits the energy of sparks and surface temperatures to safe levels. Ex ec is “increased safety – normal level of explosion protection”.

1.0 INTRODUCTION

Charge mode pressure sensors offer high performance for precise pressure measurements over a wide range of near-static and dynamic pressures. The sensors use piezoelectric properties to convert an applied pressure into an analogous electrical charge.

The internal design of a sensor incorporates a sensing element that provides high sensitivity over a wide range of pressures. As pressure is applied to the diaphragm of the sensor, a charge is generated in the crystals. The high-impedance electrostatic charge is then conditioned externally by either a laboratory-style charge amplifier or in-line charge converter prior to being sent to a readout or recording device.

Charge mode sensors are ideally suited for applications where wide dynamic range is needed. Such applications include compressors, engines, blast, ballistic, pneumatic, hydraulic, and fluid pressures. Enclosed is a Specification Sheet that lists the complete performance characteristics of the sensor purchased.

2.0 Series 176 High Temperature Differential Output Sensor

The Series 176 High temperature differential output sensor is a special-purpose high temperature charge mode pressure sensor designed specifically to measure low-level pressures in severe environments. The unit is most frequently used in engines, hydraulic and pneumatic devices, compressors and turbines. Ideal for sound pressure measurements, microphones and small pressure agitations, its maximum dynamic pressure range is 100 psi (689 kPa). It is acceleration compensated to minimize vibration sensitivity and is capable of a five-microsecond rise time.

This sensor measures transient or repetitive phenomena relative to the initial or average pressure level, over a wide amplitude range and a usable frequency range near DC to 10 000 Hz; the resonant frequency is 50 000 Hz. The operating temperature for the Series 176 ranges from 0°F to 1000°F. This hermetically sealed sensor contains extremely rigid compression-mode crystals with an integral acceleration compensating crystal to reduce vibration sensitivity and partially suppress internal resonance effects.

ECR Number: 24690

3.0 Installation

3.1 Overview

When choosing an installation method, the advantages and disadvantages of each method must be carefully weighed. Characteristics like location, ruggedness, amplitude range, accessibility, temperature and portability may be greatly affected by the installation configuration and technique. Often, the most important and overlooked consideration is the affect the mounting technique has on the frequency of the pressure being measured by the sensor.

Two basic mounting techniques are recommended for pressure sensors: the recess mount and the flush mount. The technique used is determined by the specifics of the individual application. See the Installation Drawing in this manual for additional details on the individual sensor series.

3.2 Recess Mount

A recess mount protects the sensor diaphragm from the effect of high flash temperature and particle impingement. This method is often selected because it can prolong sensor life and increase data integrity by reducing thermal effects. See Figure 3.1.

Figure 3.1 Recess Mount

When using a recess mount, note that the length of the passage may limit the frequency range of the measurement. The effect the passage has is similar to that of an under-damped second order system, with the resonant frequency determined by passage length. The passage length thus limits pressure pulse rise time and may also cause passage ringing.

The function is described by the following equation:

$$F_r = \frac{V}{4L}$$

Where: F_r = resonant frequency passage (Hz)
 V = velocity of sound in air (feet/second)
 L = length of column (feet)

For air at room temperature, the equation becomes:

$$F_r = \frac{3300}{L}$$

Where: L = passage length (inches)

The natural frequency and approximately fastest pressure step rise time for various length passages are shown in the following chart, using a medium of air at 77°F (25°C).

Selected Values for 77°F (25°C)

Passage length (inches)	Passage resonance (kHz)	Approx. fastest pulse rise time (microseconds)
.050	66	5
.100	33	10
.200	16.5	20
.50	6.6	50
1.0	3.3	100

Measured resonant frequencies may differ slightly from the chart values due to variations in the velocity of sound in the air from changes in temperature and pressure of the air in the passage.

To ensure diaphragm integrity, maintain .006 inches (.153 mm) of clearance ahead of the diaphragm as shown in Figure 3.1.

3.3 Flush Mount

In a flush mount installation, there is no reduced area passage from the sensor diaphragm to the test chamber. Instead, the sensor diaphragm is mounted flush with, or slightly recessed from, the inside surface of the test chamber. See Figure 3.2.

Figure 3.2 Flush Mount

If thermal transients or diaphragm impingement are concerns, use the flush mount technique only when space or frequency response considerations preclude the use of the recess mount installation.

In severe or pyrotechnic environments, sensor life may be seriously curtailed when using this mounting method.

3.4 Cabling

Care and attention to cable attachment is essential, as the reliability and accuracy of your system is no better than that of the output cable. First, check that you have ordered the correct cable type. As with sensors, no cable can satisfy all applications. Special low-noise cabling shielded twisted pair should be used with high-impedance, charge output devices.

Plug the connector on the cable into the mating connector on the sensor. Then, holding the sensor stationary, secure the connector in place by tightening down the attached cable sleeve.

Route the cable to a charge amplifier or in-line charge converter, making certain to strain relieve the sensor/cable connection and minimize motion by clamping the cable at regular intervals. Common sense must be used to avoid physical damage and minimize electrical noise. Avoid routing cables near high voltage wires. Do not route cables along floors or walkways where they may be stepped on or become contaminated. Shielded cable should have the shield grounded at one end only.

To dissipate any charge that may have accumulated in the cable, short the pins to ground prior to attachment to the charge amplifier or charge converter.

4.0 CALIBRATION

These sensors may be calibrated using static hydraulic techniques, such as dead-weight testers, or by comparison with a reference gage.

When calibrating with a laboratory-style charge amplifier, set the charge amplifier to LONG, for the time constant setting, and allow the sensor to stabilize before applying pressure. If slow drift is apparent, apply the pressure to the desired level, and immediately take a reading. Release the pressure and take another reading at zero pressure to obtain the difference between the readings at the desired present level and zero pressure. If the drift is too fast to take a reading, clean the cable connections according to the procedures out-lined in Section 7.0, Maintenance.

NOTE: Do not attempt to use a charge amplifier which, in the long time constant position, has less than a 5 000-second time constant for quasi-static calibration of charge sensors. Any drift may cause error.

A factory-supplied, NIST-traceable calibration graph is provided with each sensor, certifying its charge sensitivity in pC/psi, or when used with an in-line amplifier, in mV/psi.

5.0 Normal Operation

The high impedance signal generated by a charge output sensor is usually conditioned with a laboratory-style charge amplifier. The charge amplifier converts the high-impedance charge signal generated by the sensor into a low-impedance voltage signal. This signal may then be transmitted to a readout or recording device for analysis. See Figure 5.1 for a drawing of a typical system connection.

NOTE: When using charge-amplified systems, the noise floor of the system is dependent on the input capacitance to the charge amplifier. To minimize noise, keep the cable length between the pressure sensor and the charge amplifier to a minimum. Cable length does not affect the system sensitivity.

Figure 5.1 Typical System Connection

Before connecting the low-noise cable from the pressure sensor to the charge amplifier, be certain to ground the charge amplifier. This ensures that any excessive accumulated static charges across the sensor/cable combination are harmlessly discharged. If this precaution is not observed, the input FET of certain amplifiers may be destroyed. Press the ground button of the charge amplifier and adjust electrical zero if necessary.

Once system components are connected, wait a few minutes for the system to thermally stabilize. Place the switch in the OPR (operate) position and proceed with the measurement. Refer to the charge amplifier operating manual for further operating details.

For fixed sensitivity in-line charge amplifiers, the system sensitivity (mV/psi) is determined as the product of the charge amplifier sensitivity (mV/pC) and the sensor sensitivity (pC/psi).

6.0 HIGH-TEMPERATURE OPERATION

6.1 Introduction

When subjected to elevated temperature, all piezoelectric sensors/hardline cable systems exhibit decreased insulation resistance, due in part to the piezoelectric element, but due mostly to the hardline cable necessary to withstand the high temperatures. This situation can cause serious voltage offset problems in direct-coupled charge amplifiers. To solve this problem, the user must AC couple (capacitor) the charge amplifier

to the sensor/cable system. See Section 6.3, Solution to Reduced Resistance, for complete details, or use different amplifiers.

6.2 Reduced Resistance at Charge Amplifier Input

Figure 6.1 illustrates a simplified schematic of a typical direct-coupled charge amplifier where:

- R_f = Feedback resistor (ohms)
- R_i = Input leakage resistance (ohms)
- E_o = Steady-state output voltage (volts)
- e_i = Offset voltage: FET leakage (volts)
- C_f = Feedback capacitor (farads)

The feedback capacitor C_f comes into play only in the dynamic situation and its influence does not affect the steady-state situation. The voltage e_i is a DC offset voltage, usually very tiny (microvolts), that exists at the input gate of the MOSFET circuit. This minute leakage current exists in all real devices.

As demonstrated in Equation 1, the steady-state (DC) output voltage E_o is:

Equation 1

$$E_o = e_i \left(1 + \frac{R_f}{R_i} \right)$$

This equation shows that if the input (leakage) resistance at the charge amplifier is extremely high (approaching infinity), the output DC voltage approaches e_i , usually a very tiny voltage. However, as R_i decreases, the term

$$1 + \frac{R_f}{R_i}$$

increases, such that the output voltage can, with large ratios of R_f/R_i , become large enough to result in a large E_o , perhaps large enough to be outside the normal output voltage range of the charge amplifier.

Because of the feedback capacitor C_f , this output voltage change usually does not occur rapidly but rather, it manifests itself as a slow drift in the output voltage level. If R_i is low enough with respect to R_f , the voltage drift may continue until saturation of the charge amplifier occurs.

6.3 Solution to Reduced Resistance

Since the drift or offset problem is caused by a static or steady-state imbalance at the input of the charge amplifier, the solution involves blocking this steady-state effect while allowing the desired dynamic phenomena to pass. This may be accomplished by installing a series capacitor at the input of the charge amplifier, between the offending sensor (or low-impedance hardline) and the input.

Figure 6.2 illustrates a block diagram of the piezoelectric system where:

- C_1 = Shunt capacitor
- C_s = Series blocking capacitor

With the series blocking capacitor C_s in place as shown, the dynamic charge (Q) generated by the sensor element is distributed across the two capacitors, C_1 and C_s , in proportion to the size (capacitance) of each. If C_s , for example, is equal to 100 times C_1 , 99% of the charge appears at the input of the charge amplifier, while 1% is

across the shunt capacitor C_t . This results in a 1% decrease in apparent sensitivity of the system.

This therefore demonstrates the importance of selecting the series blocking capacitor at least two orders of magnitude higher than the total shunt capacitance C_t across the input of the charge amplifier.

It is also important that this capacitor be of high quality, with a leakage resistance of greater than 10^{12} ohms, to avoid the DC offset discussed previously in 6.1, Introduction.

6.4 Low-Frequency Response Limitations

In a normal charge amplifier, the low-frequency response is set by the RC time constant, as established by the product of C_f and R_f . The system acts like a high-pass first order RC filter with a -3 dB frequency established by the relationship:

Equation 2

$$f_o = \frac{.16}{R_f C_f}$$

where:

f_o = -3 dB Frequency (Hz)
 R_f = Feedback resistor (ohms)
 C_f = Feedback capacitor (farads)

However, after the addition of the series blocking capacitor C_s , the system becomes the equivalent of two high-pass filters in series, one as previously mentioned and one comprised of series capacitor C_s and total equivalent shunt resistance R_i . This new cutoff frequency is:

Equation 3

$$f_o = \frac{.16}{R_i C_s}$$

To avoid compromise of the low-frequency response established by the charge amplifier parameters and illustrated by Equation 2, the product of $R_i C_s$ should be several orders of magnitude higher than $R_f C_f$.

The approximate final system discharge time constant becomes:

Manual Number: 30737

Revision: A

ECR Number: 24690

Equation 4a

$$TC = \frac{1}{\frac{1}{R_i C_s} + \frac{1}{R_f C_f}} \quad \text{seconds}$$

If the input coupling time constant ($R_i C_s$) is very much greater than the discharge time constant of the charge amplifier ($R_f C_f$), Equation 4a then becomes:

Equation 4b

$$\frac{1}{R_i C_s} \Rightarrow 0 \text{ Seconds}$$

Equation 5

$$TC = R_f C_f$$

With the product $R_i C_s$ chosen to be much greater than $R_f C_f$, the system discharge time constant is simply $R_f C_f$ (seconds). The feedback parameters of the charge amplifier establish the low frequency characteristics of the system, unaffected by the degraded input resistance parameters of the test sensor and/or cable.

6.5 Other Precautions

Always remember to keep the OPR-GND switch on the charge amplifier in the GND position while connecting or disconnecting sensors, cable, or capacitor to the input connector. Stray or accumulated electrostatic charges may build to the point that they may saturate or even damage the input circuitry of the charge amplifier.

Operate the charge amplifier in the SHORT time constant while the sensor is subject to elevated or changing temperatures.

If it is not necessary to procure data during the transition from room temperature to operating temperature, place the OPR-GND switch in the GND position to keep spurious, thermally generated charges grounded.

It is prudent to momentarily switch to the GND position even during the measurement period to ensure that excess charges do not accumulate at the input of the charge amplifier.

7.0 MAINTENANCE

The only maintenance required on the pressure sensor is to keep the connector clean. If it is operating in a dirty environment, protect the cable connections with heat-shrink tubing or similar material.

In the event that the electrical connection of the pressure sensor becomes contaminated with dirt or moisture, the insulation resistance degrades. This may cause a reduction of sensitivity or excessive drifting when connected to the charge amplifier. If this happens, brush off the connector with no-residue solvent or other approved cleaning solutions. To restore insulation, bake the sensor in a vacuum oven at 250°F for about four hours. If the condition persists even after cleaning and/or baking, please contact a PCB applications engineer for further assistance. The sensor is hermetically sealed; it must therefore be returned to the factory if the aforementioned measures fail to restore performance.

OPTIONAL VERSIONS

Optional versions have identical specifications and accessories as listed for the standard model except where noted below. More than one option may be used.

NOTES:

- [1]Upper frequency response is calculated from Resonant Frequency.
- [2]Zero-based, least-squares line method.
- [3]Typical.
- [4]See PCB Declaration of Conformance PS058 for details.

SUPPLIED ACCESSORIES:

Model 060A25 Clamp Nut (1)
Model 40890-04 Silver Plate, SS, Seal (3)

[4]

All specifications are at room temperature unless otherwise specified.
In the interest of constant product improvement, we reserve the right to change specifications without notice.

Repair and Maintenance

PCB guarantees Total Customer Satisfaction through its “Lifetime Warranty Plus” on all Platinum Stock Products sold by PCB and through its limited warranties on all other PCB Stock, Standard and Special products. Due to the sophisticated nature of our sensors and associated instrumentation, **field servicing and repair is not recommended and, if attempted, will void the factory warranty.**

Beyond routine calibration and battery replacements where applicable, our products require no user maintenance. Clean electrical connectors, housings, and mounting surfaces with solutions and techniques that will not harm the material of construction. Observe caution when using liquids near devices that are not hermetically sealed. Such devices should only be wiped with a dampened cloth—never saturated or submerged.

In the event that equipment becomes damaged or ceases to operate, our Application Engineers are here to support your troubleshooting efforts 24 hours a day, 7 days a week. Call or email with model and serial number as well as a brief description of the problem.

Calibration

Routine calibration of sensors and associated instrumentation is necessary to maintain measurement accuracy. We recommend calibrating on an annual basis, after exposure to any extreme environmental influence, or prior to any critical test.

PCB Piezotronics is an ISO-9001 certified company whose calibration services are accredited by A2LA to ISO/IEC 17025, with full traceability to SI through N.I.S.T. In addition to our standard calibration services, we also offer specialized tests, including: sensitivity at elevated or cryogenic temperatures, phase response, extended high or low frequency response, extended range, leak testing, hydrostatic pressure testing, and others. For more information, contact your local PCB Piezotronics distributor, sales representative, or factory customer service representative.

Returning Equipment

If factory repair is required, our representatives will provide you with a Return Material Authorization (RMA) number, which we use to reference any information you have already provided and expedite the repair process. This number should be clearly marked on the outside of all returned package(s) and on any packing list(s) accompanying the shipment.

Contact Information

PCB Piezotronics, Inc.
3425 Walden Ave.
Depew, NY14043 USA
Toll-free: (800) 828-8840
24-hour SensorLine: (716) 684-0001
General inquiries: info@pcb.com
Repair inquiries: rma@pcb.com

For a complete list of distributors, global offices and sales representatives, visit our website, www.pcb.com.

Safety Considerations

This product is intended for use by qualified personnel who recognize shock hazards and are familiar with the precautions required to avoid injury. While our equipment is designed with user safety in mind, the protection provided by the equipment may be impaired if equipment is used in a manner not specified by this manual.

Discontinue use and contact our 24-Hour Sensorline if:

- Assistance is needed to safely operate equipment
- Damage is visible or suspected
- Equipment fails or malfunctions

For complete equipment ratings, refer to the enclosed specification sheet for your product.

Definition of Terms and Symbols

The following symbols may be used in this manual:

DANGER

Indicates an immediate hazardous situation, which, if not avoided, may result in death or serious injury.

**CAUTION**

Refers to hazards that could damage the instrument.

**NOTE**

Indicates tips, recommendations and important information. The notes simplify processes and contain additional information on particular operating steps.

The following symbols may be found on the equipment described in this manual:

This symbol on the unit indicates that high voltage may be present. Use standard safety precautions to avoid personal contact with this voltage.

This symbol on the unit indicates that the user should refer to the operating instructions located in the manual.

This symbol indicates safety, earth ground.

Repair and Maintenance

PCB guarantees Total Customer Satisfaction through its “Lifetime Warranty Plus” on all Platinum Stock Products sold by PCB and through its limited warranties on all other PCB Stock, Standard and Special products. Due to the sophisticated nature of our sensors and associated instrumentation, **field servicing and repair is not recommended and, if attempted, will void the factory warranty.**

Beyond routine calibration and battery replacements where applicable, our products require no user maintenance. Clean electrical connectors, housings, and mounting surfaces with solutions and techniques that will not harm the material of construction. Observe caution when using liquids near devices that are not hermetically sealed. Such devices should only be wiped with a dampened cloth—never saturated or submerged.

In the event that equipment becomes damaged or ceases to operate, our Application Engineers are here to support your troubleshooting efforts 24 hours a day, 7 days a week. Call or email with model and serial number as well as a brief description of the problem.

Calibration

Routine calibration of sensors and associated instrumentation is necessary to maintain measurement accuracy. We recommend calibrating on an annual basis, after exposure to any extreme environmental influence, or prior to any critical test.

PCB Piezotronics is an ISO-9001 certified company whose calibration services are accredited by A2LA to ISO/IEC 17025, with full traceability to SI through N.I.S.T. In addition to our standard calibration services, we also offer specialized tests, including: sensitivity at elevated or cryogenic temperatures, phase response, extended high or low frequency response, extended range, leak testing, hydrostatic pressure testing, and others. For more information, contact your local PCB Piezotronics distributor, sales representative, or factory customer service representative.

Returning Equipment

If factory repair is required, our representatives will provide you with a Return Material Authorization (RMA) number, which we use to reference any information you have already provided and expedite the repair process. This number should be clearly marked on the outside of all returned package(s) and on any packing list(s) accompanying the shipment.

Safety Considerations

This product is intended for use by qualified personnel who recognize shock hazards and are familiar with the precautions required to avoid injury. While our equipment is designed with user safety in mind, the protection provided by the equipment may be impaired if equipment is used in a manner not specified by this manual.

Discontinue use and contact our 24-Hour Sensorline if:

- Assistance is needed to safely operate equipment
- Damage is visible or suspected
- Equipment fails or malfunctions

For complete equipment ratings, refer to the enclosed specification sheet for your product.

Definition of Terms and Symbols

The following symbols may be used in this manual:

DANGER

Indicates an immediate hazardous situation, which, if not avoided, may result in death or serious injury.

**CAUTION**

Refers to hazards that could damage the instrument.

**NOTE**

Indicates tips, recommendations and important information. The notes simplify processes and contain additional information on particular operating steps.

The following symbols may be found on the equipment described in this manual:

This symbol on the unit indicates that high voltage may be present. Use standard safety precautions to avoid personal contact with this voltage.

This symbol on the unit indicates that the user should refer to the operating instructions located in the manual.

This symbol indicates safety, earth ground.

제2019-018373-01-1호

안전인증서

PCB Piezotronics Inc.

3425 Walden Avenue, Depew, New York 14043, USA

위 사업장에서 제조하는 아래의 품목이 「산업안전보건법」 제34조 및 같은 법 시행규칙 제58조의4제4항에 따른 안전인증 심사 결과 안전·보건기준에 적합하므로 안전인증표시의 사용을 인증합니다.

품 목

High Temperature Pressure Transducer

형식·모델(용량·등급) / 인증번호

176***/*-***-*(Ex ia IIC T6...T530 °C, T660 °C) / 15-KA4BO-0201X

인증기준

고용노동부고시 제2018-53호

인증조건

1. 제조공장

·본 인증서는 '3425 Walden Avenue, Depew, New York 14043, USA'에서 생산하는 제품에 한함.

2. 제품개요

·압전소자를 이용하여, 높은 온도의 가스터빈 등에 대한 상태점검 및 분석을 위한 입력을 측정하는 센서
·본질안전을 위한 전기적 파라미터

- $U_i = 30 \text{ V}$, $I_i = 300 \text{ mA}$, $P_i = 1 \text{ W}$, $C_i = 5 \text{ nF}$, $L_i = 0.5 \text{ mH}$

·사용주위온도: $-70 \text{ }^\circ\text{C} \leq T_a \leq +80 \text{ }^\circ\text{C}$ (T6) / $+95 \text{ }^\circ\text{C}$ (T5) / $+130 \text{ }^\circ\text{C}$ (T4) / $+195 \text{ }^\circ\text{C}$ (T3) / $+290 \text{ }^\circ\text{C}$ (T2) / $+440 \text{ }^\circ\text{C}$ (T1) / $+520 \text{ }^\circ\text{C}$ (T530 °C) / $+650 \text{ }^\circ\text{C}$ (T660 °C)

3. 인증범위: 본 인증서는 아래의 형식번호에 한하여 유효함

·176***/*-***-*

*: 방폭 성능에 영향을 주지 않는 제품코드임.

4. 안전한 사용을 위한 조건

·관련 IECEx 인증서(IECEx LCIE 12.0025X issue No.3) 3페이지 SPECIFIC CONDITIONS OF USE참조

5. 인증(변경)사항

·1차 변경(2019.04.29.): 기존 제2015-021904-01호에서 부품 변경 및 온도 등급 변경에 따른 최신 인증서 갱신으로 인한 문서변경

6. 그 밖의 사항

·사용자 설명서 참조

·안전인증품의 품질관리, 확인심사 수검, 변경사항 신고 등 인증 받은 자의 의무 준수

·본 안전인증서는 반드시 관련 IECEx 인증서(IECEx LCIE 12.0025X issue No.3)와 함께 사용

2015년 6월 5일

한국산업기술시험원장

사용 지침- 176

모델(들)	176시리즈
표시	<p>PCB Depew, NY S/N xxxxxx MM/YYYY</p> <p>LCIE 08 ATEX 6102 X Ex ia IIC T6 to T530°C Ga, II 1G Ex ia IIC T6 to T660°C Ga, II 1G Ex ia IIC T6 to T770°C Ga, II 1G</p> <p>LCIE 06 ATEX 6041 X Ex ec IIC T6 to T530°C Gc, II 3G Ex ec IIC T6 to T660°C Gc, II 3G Ex ec IIC T6 to T770°C Gc, II 3G</p> <p>IECEX LCIE 12.0025 X IECEX LCIE 12.0026 X Ui: 30V, Ii: 300 mA, Pi: 1W, Ci: 5nF, Li: 0.3mH</p>
서비스 시작	<p>설치 방법을 선택할 때는 각 방법의 장단점을 면밀히 검토해야 합니다. 위치, 견고성, 진폭 범위, 접근성, 온도 및 휴대성과 같은 특성은 설치 구성 및 기술에 따라 크게 영향을 받을 수 있습니다. 종종 가장 중요하지만 간과되는 고려 사항은 장착 기술이 센서가 측정하는 압력의 주파수에 미치는 영향입니다.</p> <p>압력 센서에는 리세스 마운트와 플러시 마운트라는 두 가지 기본 장착 기술이 권장됩니다. 사용되는 기술은 개별 애플리케이션의 특성에 따라 결정됩니다. 개별 센서 시리즈에 대한 자세한 내용은 이 설명서의 설치 도면을 참조하십시오.</p> <p>충전 출력 센서에서 생성된 높은 임피던스 신호는 일반적으로 실험실 스타일의 충전 증폭기로 조정됩니다. 전하 증폭기는 센서에서 생성된 고임피던스 전하 신호를 저임피던스 전압 신호로 변환합니다. 그런 다음 이 신호는 분석을 위해 판독 또는 기록 장치로 전송될 수 있습니다.</p>
안전한 사용	<p>압력 센서의 저소음 케이블을 충전 증폭기에 연결하기 전에 충전 증폭기를 접지해야 합니다. 이렇게 하면 센서/케이블 조합에 과도하게 축적된 정전하가 무해하게 방전될 수 있습니다. 이 주의 사항을 준수하지 않으면 특정 증폭기의 입력 FET가 손상될 수 있습니다. 필요한 경우 충전 증폭기의 접지 버튼을 누르고 전기적 영점을 조정합니다.</p> <p>시스템 구성 요소가 연결되면 시스템이 열적으로 안정화될 때까지 몇 분간 기다립니다. 스위치를 OPR(작동) 위치에 놓고 측정을 계속 진행합니다. 자세한 작동 방법은 충전 증폭기 사용 설명서를 참조하세요.</p>

	고온에 노출되면 모든 압전 센서/하드라인 케이블 시스템은 절연 저항이 감소하는데, 이는 부분적으로는 압전 소자 때문이지만 대부분 고온을 견디는 데 필요한 하드라인 케이블 때문이기도 합니다. 이러한 상황은 직접 결합 충전 증폭기에서 심각한 전압 오프셋 문제를 일으킬 수 있습니다. 이 문제를 해결하려면 사용자는 충전 증폭기를 센서/케이블 시스템에 AC로 연결(커패시터)해야 합니다.
조립	176 시리즈 압력 센서에는 밀폐형 니켈 합금(예: INCO) 및/또는 스테인리스 스틸 하우징(예: 304L)이 있습니다. 밀폐형 일체형 케이블 또는 일체형 커넥터(하드라인 케이블 없음)의 두 가지 버전이 있습니다. 센서는 조립이 필요하지 않습니다. 표준 장착 액세서리를 사용하여 모니터링 대상 기계에 장착하기만 하면 됩니다.
해체	마운팅에서 분리하는 것 외에는 센서를 분해할 필요가 없습니다.
유지 관리	전기 커넥터, 하우징 및 장착 표면을 물리적 구성 재료에 해를 끼치지 않는 용액과 기술을 사용하여 청소하는 것과 같은 일상적인 유지 관리는 허용됩니다.
서비스	PCB Piezotronics에서 제공하는 센서 및 관련 기기의 정교한 특성으로 인해 사용자 서비스 또는 수리는 권장되지 않으며, 시도할 경우 공장 보증이 무효화될 수 있습니다. 그러나 센서 및 관련 기기의 정기적인 보정은 측정 정확도 및 수집된 데이터에 대한 신뢰도를 높이는 데 도움이 되므로 권장됩니다.
수리	장비가 손상되거나 작동이 중단되는 경우, 수리를 위해 장비를 PCB Piezotronics에 반환해야 합니다. 사용자 서비스 또는 수리는 권장되지 않으며, 시도할 경우 공장 보증이 무효화될 수 있습니다.
설치	<p>개요: 센서를 장착해야만 서비스를 이용할 수 있습니다. 장착 방법을 선택할 때는 각 기술의 장단점을 면밀히 고려해야 합니다. 위치, 견고성, 진폭 범위, 접근성, 온도 및 휴대성과 같은 특성은 매우 중요합니다. 그러나 가장 중요하지만 종종 간과되는 고려 사항은 장착 기술이 압력 센서의 고주파 성능에 미치는 영향입니다. 장착 방법은 다음과 같습니다: 리세스 마운트 또는 플러시 마운트.</p> <p>케이블 연결: 시스템의 안정성과 정확성은 출력 케이블에 달려 있으므로 케이블 연결에 주의와 관심을 기울여야 합니다. 먼저 올바른 케이블 유형을 주문했는지 확인하세요. 센서와 마찬가지로 어떤 케이블도 모든 애플리케이션을 만족시킬 수는 없습니다. 고임피던스, 충전 출력 장치에는 특수 저잡음 차폐 연선 케이블을 사용해야 합니다.</p> <p>케이블의 커넥터를 센서의 결합 커넥터에 꽂습니다. 그런 다음 센서를 고정시킨 상태에서 부착된 케이블 슬리브를 조여 커넥터를 제자리에 고정합니다.</p> <p>케이블을 충전 증폭기 또는 인라인 충전 컨버터에 연결할 때 센서/케이블 연결부에 무리가 가지 않도록 주의하고 케이블을 일정한 간격으로 고정하여 움직임을 최소화하세요. 물리적 손상을 방지하고 전기적 노이즈를 최소화하기 위해 상식적인 방법을 사용해야 합니다. 고전압 전선 근처에 케이블을 배치하지 마십시오. 밟히거나 오염될 수 있는 바닥이나 통로를 따라 케이블을 배선하지 마십시오. 차폐 케이블은 한쪽 끝에만 차폐를 접지해야 합니다.</p>
조정	센서는 밀폐된 장치이므로 사용자가 조정할 수 없습니다. 그러나 측정 정확도와 수집된 데이터에 대한 신뢰를 구축하는 데 도움이 되므로 제조업체에서 센서를 정기적으로 보정하는 것이 좋습니다.

위험 구역(압력 완화 장치용)	해당 없음 - 압력 완화 장치가 아닙니다.
교육 지침	산업용 센서는 다음 지침에 따라 숙련된 전문가가 위험 장소에 설치해야 합니다. EN/IEC 60079-14요구 사항.
안전에 대한 세부 정보보호 범주	Ex ia는 스파크의 에너지와 표면 온도를 안전한 수준으로 제한하는 "내재적 안전"입니다. Ex ec는 "안전성 향상 - 일반 방폭 수준"입니다.
엔티티 매개변수 및 한계(값)	온도 범위:-70°C to +760°C Ui: 30V, Ii: 300 mA, Pi: 1W, Ci: 5nF, Li: 0.3mH
특정 사용 조건	"ia" 보호 장치는 인증된 관련 본질 안전 장비에만 연결해야 하며, 이 조합은 본질 안전 규칙과 관련하여 호환되어야 합니다(위에 나열된 전기적 매개변수 참조). "ec" 보호 장치(트랜스듀서)는 전기 파라미터가 다음 값을 초과하지 않는 장비에만 연결해야 합니다.: U: 30V, I: 300 mA 작동 주변 온도:-70°C to +760°C 온도 분류:T6 to Ta ≤ +80°C T5 to Ta ≤ +95°C T4 to Ta ≤ +130°C T3 to Ta ≤ +195°C T2 to Ta ≤ +290°C T1 to Ta ≤ +440°C T530°C to Ta ≤ +520°C T660°C to Ta ≤ +650°C T770°C to Ta ≤ +760°C <ul style="list-style-type: none"> • 장치는 설치 도면에 따라 설치해야 합니다. N° 54210. • 설치자는 트랜스듀서 장착 구조가 배리어 접지('A' 설치)와 동일한 접지 전위에 있는지 확인해야 합니다. • 센서의 금속 본체와 케이블 차폐는 시스템 접지에 안정적으로 연결되어 있어야 합니다. • 설치자는 센서가 기계적 충격을 받지 않는 방식으로 장착되도록 해야 합니다. • 설치자는 최종 사용자가 제공한 결합 커넥터가 구역 2 적용을 위해 IEC 60079-0 및 IEC 60079-7의 모든 해당 조항을 준수하는지 확인해야 합니다('ec' 설치의 경우). IEC 60079-0에 따른 최소 보호 등급 IP54가 보장되어야 합니다. 전원이 공급된 상태에서 결합 커넥터를 연결하거나 분리해서는 안 됩니다. • 경고 - 전원이 켜져 있을 때는 연결하거나 분리하지 마세요.
시스템에 장착된 도구의 필수 특성(있는 경우).	해당 없음 - 시스템에 도구가 장착되어 있지 않습니다.

12 DESCRIPTION DU PRODUIT

Le capteur de pression se compose d'un boîtier métallique hermétiquement scellé, contenant uniquement un élément de détection piézoélectrique, avec un câble intégré équipé d'un connecteur à son extrémité.
Le capteur peut également être fabriqué avec un connecteur intégré (sans câble) soudé sur le boîtier du capteur.

DESCRIPTION OF PRODUCT

The pressure transducer consists of a metallic hermetically sealed housing, containing only a piezoelectric sensing element assembly, with an integral cable fitted with a connector at its end.
The transducer can also be manufactured with an integral connector (without cable) welded on the transducer's housing.

⁽¹⁾ Completed as per the type

⁽²⁾ See the Specific Conditions of Use (the temperature class depends on T_{amb} max.)

The equipment shall also bear the usual marking required by the product standards applying to such equipment under the manufacturer responsibility.

13 CONDITIONS PARTICULIERES D'UTILISATION

a. Gamme de température ambiante de fonctionnement et classement en température :

Gamme de température ambiante de fonctionnement <i>Ambient operating temperature range</i>	Classement en température <i>Temperature classification</i>
$-70\text{ °C} \leq T_{amb} \leq +80\text{ °C}$	T6
$-70\text{ °C} \leq T_{amb} \leq +95\text{ °C}$	T5
$-70\text{ °C} \leq T_{amb} \leq +130\text{ °C}$	T4
$-70\text{ °C} \leq T_{amb} \leq +195\text{ °C}$	T3
$-70\text{ °C} \leq T_{amb} \leq +290\text{ °C}$	T2
$-70\text{ °C} \leq T_{amb} \leq +440\text{ °C}$	T1
$-70\text{ °C} \leq T_{amb} \leq +520\text{ °C}$	T530 °C
$-70\text{ °C} \leq T_{amb} \leq +650\text{ °C}$	T660 °C
$-70\text{ °C} \leq T_{amb} \leq +760\text{ °C}$	T770 °C

b. L'appareil doit uniquement être connecté à une source externe délivrant au maximum une tension de 30 V et un courant de 300 mA.

SPECIFIC CONDITIONS OF USE

Ambient operating temperature range & Temperature classification:

The transducer shall be connected to an external power supply delivering a maximum of 30 V and 300 mA.

Seul le texte en français peut engager la responsabilité du LCIE. Ce document ne peut être reproduit que dans son intégralité, sans aucune modification. Il est établi en accord avec le référentiel de certification ATEX du LCIE. The LCIE's liability applies only on the French text. This document may only be reproduced in its entirety and without any change. It is issued in accordance with LCIE's ATEX Certification Rules.
 CERT-ATEX-FORM 05 Rev. 05

c. Le montage du produit dans une installation doit être effectué de telle sorte que le corps métallique du capteur et le blindage du câble soient reliés de manière fiable à la terre du système.

The mounting of the transducer in an installation must be carried out in such a way that the metallic housing of the transducer and the cable shield are reliably connected to the system earth.

d. Le connecteur mâle ou femelle homologue fourni par l'utilisateur final doit être conforme à toutes les clauses applicables des normes EN 60079-0 et EN 60079-7. Un degré de protection IP54 minimum selon la norme IEC 60079-0 doit être assuré.

The mating connector provided by the end user shall be in accordance with all applicable clauses of IEC 60079-0 and IEC 60079-7 for a zone 2 application. A minimum degree of protection IP54 according to IEC 60079-0 shall be ensured. The mating connector shall not be connected or disconnected when energized.

Le connecteur homologue ne doit pas être connecté ou déconnecté sous tension.

e. AVERTISSEMENT – NE PAS CONNECTER OU DECONNECTER SOUS TENSION

WARNING – DO NOT CONNECT OR DISCONNECT WHEN ENERGIZED

14 EXIGENCES ESSENTIELLES DE SANTE ET DE SECURITE

ESSENTIAL HEALTH AND SAFETY REQUIREMENTS

Couvertes par les normes listées au point 8.

Covered by standards listed at 8.

16 INFORMATIONS COMPLEMENTAIRES

ADDITIONAL INFORMATION

Essais individuels

Conformément au paragraphe 7.1 de la norme EN 60079-7, chaque produit fabriqué doit être soumis à un essai de rigidité diélectrique à 500 V c.a. pendant 1 minute. Alternativement, le test peut être effectué à 600 V c.a. pendant 100 ms. Aucun claquage ne doit se produire.

Routine tests

In accordance with clause 7.1 of standard EN 60079-7, each product manufactured shall be subjected to a dielectric strength test at 500 V a.c. for 1 minute. Alternatively the test may be carried out at 600 V a.c. for 100 ms. No breakdown shall occur.

MARKINGS

The manufacturer is required to apply the following markings:

- Products shall be marked with the markings specified by the particular product standard.
- Products certified for Canada shall have all Caution and Warning markings in both English and French.

Additional bilingual markings not covered by the product standard(s) may be required by the Authorities Having Jurisdiction. It is the responsibility of the manufacturer to provide and apply these additional markings, where applicable, in accordance with the requirements of those authorities.

The products listed are eligible to bear the CSA Mark shown with adjacent indicators 'C' and 'US' for Canada and US (indicating that products have been manufactured to the requirements of both Canadian and U.S. Standards) or with adjacent indicator 'US' for US only or without either indicator for Canada only.

Markings are etched directly into the Sensor enclosure body. The following marking details appear:

- CSA Monogram with C-US indicator.
- Submitter Identification
- Certificate reference CSA 06.1742175
- Model Number
- Serial Number, Date Code or Month and Year of Manufacture
- Electrical Rating
- Hazardous Location Designation
- The term 'Class I, Zone 0' adjacent to the AEx ia IIC T6...T770 marking
- The term 'Class I, Zone 2' adjacent to the AEx nA IIC T6...T770 marking
- Ambient temperature range as per product listing

Notes:

Products certified under Class C225803, C225804, C225883, C225884 have been certified under CSA's ISO/IEC 17065 accreditation with the Standards Council of Canada (SCC).

Supplement to Certificate of Compliance

Certificate: 1742175

Master Contract: 184981

The products listed, including the latest revision described below, are eligible to be marked in accordance with the referenced Certificate.

Product Certification History

Project	Date	Description
80131422	2023-05-19	Update to report 1742175 for Model 176XYM/MZZZ-AA, High Temperature Pressure Transducer to include a higher temperature range from the current 660° to 770°C, Increased Ii/ I _{max} from 100 mA to 300 mA. Reduced inductance from Li≤500μH to Li≤300μH; Update of enclosure material specification: materials do not contain by mass more than 10% in total Magnesium, Titanium and Zirconium and 7.5% in total magnesium. Upgrade to the latest ordinary locations standards.
70068556	2016-05-06	Temperature Range Modification 176 Series
70028573	2015-06-22	Update to the Report 1742175 for Model 176XYM/MZZ construction with alternative type of piezo crystal and additional temperature ranges.
2692514	2014-05-23	Update to add Class I, Div. 1, Groups A, B, C, and D and AEx/Ex ia IIC T4...T1 markings.
1742175	2006-05-04	Model 176Mxx High Temperature Pressure Transducer for Div. 2/Zone 2 Hazardous Locations.

This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer's quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEx Quality system requirements. This certificate is granted subject to the conditions as set out in IECEx Scheme Rules, IECEx 02 and Operational Documents as amended.

STANDARDS:

The electrical apparatus and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards:

IEC 60079-0 : 2011 Explosive atmospheres - Part 0: General requirements
Edition:6.0

IEC 60079-15 : 2010 Explosive atmospheres - Part 15: Equipment protection by type of protection "n"
Edition:4

*This Certificate **does not** indicate compliance with electrical safety and performance requirements other than those expressly included in the Standards listed above.*

Page 3 of 4

Schedule

EQUIPMENT:

Equipment and systems covered by this certificate are as follows:

The equipment is formed of a hermetically sealed metal housing containing only a piezo-crystal assembly connected to an integral cable.

Designation of the model : 176XYY/MZZZ-AA :

X = A to Z for family code

YY = 01 to 99 for indicate mounting, diaphragm, cabling or connector variations

M = optional to indicate metric cable length

ZZZ = 001 to 999 is optional to indicate cable length in feet (≤ 200 feet) or meters (≤ 61 m)

AA = 01 to 99 is optional to indicate fractional length of cable in inches or centimeters

SPECIFIC CONDITIONS OF USE: YES as shown below:

The transducer must be only connected to an equipment whose electrical parameters do not exceed the following values : U : 30V, I : 300 mA.

Temperature classification :

Temperature classification	Ambient temperature
T6	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +80^{\circ}\text{C}$
T5	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +95^{\circ}\text{C}$
T4	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +130^{\circ}\text{C}$
T3	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +195^{\circ}\text{C}$
T2	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +290^{\circ}\text{C}$
T1	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +440^{\circ}\text{C}$
T530°C	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +520^{\circ}\text{C}$
T660°C	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +650^{\circ}\text{C}$

For final installation, the device shall be connected in compliance with IEC 60079-14 requirements, providing and maintaining degree of protection at last IP54.

RANGE DETAILS

X = A to Z for family code
YY = 01 to 99 for indicate mounting, diaphragm, cabling or connector variations
M = optional to indicate metric cable length
ZZZ = 001 to 999 is optional to indicate cable length in feet (≤ 200 feet) or meters (≤ 61m)
AA = 01 to 99 is optional to indicate fractional length of cable in inches or centimeters

RATINGS

U : 30V, I : 300 mA

FULL CONDITIONS OF CERTIFICATION

The transducer must be only connected to an equipment whose electrical parameters do not exceed the following values:
U: 30V, I: 300 mA.
Temperature classification :

Temperature classification	Ambient temperature
T6	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +80^{\circ}\text{C}$
T5	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +95^{\circ}\text{C}$
T4	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +130^{\circ}\text{C}$
T3	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +195^{\circ}\text{C}$
T2	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +290^{\circ}\text{C}$
T1	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +440^{\circ}\text{C}$
T530°C	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +520^{\circ}\text{C}$
T660°C	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +650^{\circ}\text{C}$

For final installation, the device shall be connected in compliance with IEC 60079-14 requirements, providing and maintaining degree of protection at last IP54.

ROUTINE TESTS

According to clause 23.2.1 of standard IEC 60079-15 each apparatus shall be submitted to a dielectric strength test under 600 Volts during 100ms.

This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer's quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEX Quality system requirements. This certificate is granted subject to the conditions as set out in IECEX Scheme Rules, IECEX 02 and Operational Documents as amended

STANDARDS :

The equipment and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards

[IEC 60079-0:2017](#) Explosive atmospheres - Part 0: Equipment - General requirements
Edition:7.0

[IEC 60079-11:2011](#) Explosive atmospheres - Part 11: Equipment protection by intrinsic safety "i"
Edition:6.0

This Certificate **does not** indicate compliance with safety and performance requirements other than those expressly included in the Standards listed above.

TEST & ASSESSMENT REPORTS:

A sample(s) of the equipment listed has successfully met the examination and test requirements as recorded in:

Test Reports:

IECEX Certificate of Conformity

Certificate No.: **IECEX LCIE 12.0025X**

Page 3 of 4

Date of issue: 2023-09-11

Issue No: 6

EQUIPMENT:

Equipment and systems covered by this Certificate are as follows:

The sensor is made of a hermetically sealed metal housing containing only a piezo-crystal assembly connected to an integral cable (maximum length 61m).

Designation of the model : 176XYY/MZZZ-A ((Refer to attachment for full detail)).

SPECIFIC CONDITIONS OF USE: YES as shown below:

- The apparatus can be only connected to certified intrinsically safe equipment. This combination must be compatible as regards intrinsic safety rules (see electrical parameters),
- The mounting of the apparatus into an installation must be carried out in such a way that metallic body of the sensor and cable shield are reliably connected to the system earth.
- The equipment must be mounted in such a way that it is not subjected to mechanical shocks on the sensor.
- Temperature classification (Refer to attachment for full details).

RANGE DETAILS

Designation model : 176XYY/MZZZ-AA :

X = A to Z for family code
YY = 01 to 99 for indicate mounting, diaphragm, cabling or connector variations
M = optional to indicate metric cable length
ZZZ = 001 to 999 is optional to indicate cable length in feet (≤ 200 feet) or meters (≤ 61 m)
AA = 01 to 99 is optional to indicate fractional length of cable in inches or centimeters

RATINGS

U_i : 30V, I_i : 300mA, P_i : 1W, C_i : 5nF, L_i : 0,3 mH

FULL CONDITIONS OF CERTIFICATION

- The apparatus can be only connected to certified intrinsically safe equipment. This combination must be compatible as regards intrinsic safety rules (see electrical parameters),
- The mounting of the apparatus into an installation must be carried out in such a way that metallic body of the sensor and cable shield are reliably connected to the system earth.
- The equipment must be mounted in such a way that it is not subjected to mechanical shocks on the sensor.
- Temperature classification :

Annex 01 to Certificate IECEX LCIE 12.0025X issue 06

Temperature classification	Ambient temperature
T6	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +80^{\circ}\text{C}$
T5	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +95^{\circ}\text{C}$
T4	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +130^{\circ}\text{C}$
T3	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +195^{\circ}\text{C}$
T2	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +290^{\circ}\text{C}$
T1	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +440^{\circ}\text{C}$

ПРИЛОЖЕНИЕ

К СЕРТИФИКАТУ СООТВЕТСТВИЯ № ЕАЭС RU C-US.AA87.B.00217/19 Лист 2

Серия RU № 0621345

1. НАЗНАЧЕНИЕ И ОБЛАСТЬ ПРИМЕНЕНИЯ

Пьезоэлектрические преобразователи (далее – преобразователи) предназначены для контроля параметров вибрации, динамического давления и преобразования их в электрический сигнал.

Вибропереключатели предназначены для контроля уровня вибрации и защиты оборудования от повышенной вибрации.

Предусилители предназначены для преобразования зарядового сигнала в вольтовый.

Область применения - взрывоопасные зоны помещений и наружных установок согласно Ex-маркировке, ГОСТ IEC 60079-14-2013, регламентирующих применение во взрывоопасных средах.

2. СТРУКТУРНОЕ ОБОЗНАЧЕНИЕ

2.1. Преобразователи 176ХУУ/МZZZ-АА

X = от А до Z ревизия продукта, не влияющая на взрывозащиту

УУ = от 01 до 99 для индикации вариантов монтажа, диафрагмы, кабелей или разъемов

M = опционально для указания метрической длины кабеля

ZZZ = от 001 до 999 опционально для указания длины кабеля в футах: (не более 200 футов) или метрах: (не более 61 м)

AA = от 01 до 99 опционально для указания дробной длины кабеля в дюймах или сантиметрах, не влияющей на взрывозащиту

2.2. Преобразователи 351abcd

a – ревизия продукта, может быть: А,В,С,D,E,F,G,H,I,J,K,L или M, не влияющая на взрывозащиту

b – первая цифра вариации продукта, может быть: 0,1,2,3,4,5,6,7,8 или 9, не влияющая на взрывозащиту

c – вторая цифра вариации продукта, может быть: 0,1,2,3,4,5,6,7,8 или 9, не влияющая на взрывозащиту

d – третья цифра вариации продукта, может быть: 0,1,2,3,4,5,6,7,8,9 или отсутствует, не влияющая на взрывозащиту

2.3 Преобразователи EX(TO)(M)602yzzz/aaa, EX(TO)(M)603yzzz/aaa, EX(TO)(M)606yzzz/aaa, EX(TO)(M)607yzzz/aaa, EX(TO)(M)608yzzz/aaa, EX(M)637XYYYZ, (M)638XYYYZ

XX = TO (с температурным выходом), M (с метрической резьбой),

y = одна буква от А до Z, не влияющая на взрывозащиту

zzz = две или три цифры от 00 до 999, не влияющие на взрывозащиту

aaa = длина кабеля и/или тип разъема

2.4 Предусилители EX682XYYY

X – ревизия продукта (А,В ... М), не влияющая на взрывозащиту

YYY: параметры фильтрации, усиления, частотная характеристика, ... (от 1 до 999), не влияющие на взрывозащиту

2.5 Преобразователи EX(RV)(TO)(M)64хухх, EX(RV)(TO)(M)649ухх, EX (RV)(TO) (M)686ухх

XX = M (с метрической резьбой), TO (с температурным выходом), RV (с доп. вольтовым выходом).

Буквы х являются переменными цифрами (значения от 0 до 9), не влияющими на взрывозащиту

y = одна буква от А до Z, не влияющая на взрывозащиту

2.6 Преобразователи EX (XX) 622yzzz / aaa, EX (XX) 623yzzz / aaa, EX (XX) 625yzzz / aaa, EX (XX) 628yzzz / aaa

XX = HT (Высокотемпературная версия), M (с метрической резьбой), TO (с температурным выходом), VO (с выходом по скорости).

y = одна буква от А до Z, не влияющая на взрывозащиту

zzz = две или три цифры от 00 до 999, не влияющие на взрывозащиту

aaa = длина кабеля и/или тип разъема

2.7 Вибропереключатели 685ухх

Буквы х являются переменными цифрами (значения от 0 до 9), не влияющими на взрывозащиту

y = одна буква от А до Z, не влияющая на взрывозащиту

Руководитель (уполномоченное
лицо) органа по сертификации

ПРИЛОЖЕНИЕ

К СЕРТИФИКАТУ СООТВЕТСТВИЯ № ЕАЭС RU C-US.AA87.B.00217/19 Лист 4

Серия RU № 0621347

3.4. Электрические параметры:

3.4.1 вибропереключателей 685ухх

Напряжение питания, В 85-245 (AC), 24 (DC)
Максимальный ток, mA 150

3.4.2 преобразователей EX(TO)(M)602yzzz/aaa, EX(TO)(M)603yzzz/aaa, EX(TO)(M)606yzzz/aaa, EX(TO)(M)607yzzz/aaa, EX(TO)(M)608yzzz/aaa, EX (XX) 622yzzz / aaa, EX (XX) 623yzzz / aaa, EX (XX) 625yzzz / aaa, EX (XX) 628yzzz / aaa

с Ex-маркировкой 2Ex nA IIC T4 Gc X:

Напряжение питания, В 28
Максимальный ток, mA 200
Мощность, Вт 1

3.4.3 преобразователей EX(M)637XYYYZ, (M)638XYYYZ

Напряжение питания, В 18 – 28
Максимальный ток, mA 1,6 – 20
Мощность, Вт 0,5

3.4.4 Предусилителей EX682XYYY

Напряжение питания, В 22 – 28
Максимальный ток, mA 3,1 – 4,1
Мощность, Вт 0,1

3.4.5 преобразователей EX(RV)(TO)(M)64уххх, EX(RV)(TO)(M)649ухх, EX (RV)(TO) (M)686ухх

Напряжение питания, В 18 – 30
Максимальный ток, mA 1,6 – 20
Мощность, Вт 0,5

4. ОПИСАНИЕ КОНСТРУКЦИИ И СРЕДСТВ ОБЕСПЕЧЕНИЯ ВЗРЫВОЗАЩИЩЕННОСТИ

Преобразователи состоят из герметичного цилиндрического металлического корпуса, в котором размещается печатная плата и пьезокристаллический элемент. Сборка подключается к разъему или встроенному кабелю. На наружной поверхности корпуса преобразователя нанесена маркировка.

Вибропереключатели серии 685ухх выполнены в металлическом корпусе, внутри которого размещена электронная плата. На наружной поверхности корпуса нанесена маркировка.

Предусилители серии EX682XYYY выполнены в прямоугольном пластиковом корпусе с креплением на DIN рейку. Внутри корпуса размещена электронная плата. На корпусе размещен съемный клеммный блок. На наружной поверхности корпуса нанесена маркировка.

Подробное описание конструкции приведено в Руководствах по эксплуатации №750119 от 23.01.19, №830119 от 23.01.19, №940219 от 07.02.19, №630119 от 22.01.19, №610119 от 22.01.19, №910219 от 07.02.19, №950219 от 08.02.19, №970219 от 08.02.19

Взрывозащищенность преобразователей, вибропереключателей и предусилителей обеспечивается выполнением требований: ГОСТ 31610.15-2012/МЭК 60079-15:2005, ГОСТ 31610.0-2014 (IEC 60079-0:2011), ГОСТ IEC 60079-1-2011, ГОСТ 31610.11-2014 (IEC 60079-11:2011), в соответствии с Ex-маркировкой.

5. МАРКИРОВКА

Маркировка, наносимая на преобразователи, вибропереключатели и предусилители, включает следующие данные:

- товарный знак или наименование предприятия-изготовителя;
- серийный номер или номер партии;
- диапазон значений температур окружающей среды при эксплуатации;
- Ex-маркировку;
- специальный знак взрывобезопасности;
- наименование центра по сертификации и номер сертификата;
- предупредительные надписи;
- искробезопасные параметры

и другие данные, которые изготовитель должен отразить в маркировке, в соответствии с требованиями нормативной и технической документации.

6. СПЕЦИАЛЬНЫЕ УСЛОВИЯ ПРИМЕНЕНИЯ

5.1 Знак X, стоящий после Ex-маркировки, означает, что при эксплуатации преобразователей, вибропереключателей, предусилителей необходимо соблюдать следующие специальные условия:

- преобразователи, вибропереключатели, предусилители должны быть подключены к сертифицированному на соответствие требованиям ТР ТС 012/2011 источнику питания с соответствующей областью применения.

5.2 Свободные концы постоянно подсоединенного кабеля должны подключаться в сертифицированной на соответствие требованиям ТР ТС 012/2011 соединительной коробке или вне взрывоопасной зоны.

Специальные условия применения, обозначенные знаком X, отражены в сопроводительной документации, подлежащей обязательной поставке в комплекте с каждым изделием.

Внесение изменений в конструкцию изделий возможно только по согласованию с ОС ЦСВЭ в соответствии с требованиями ТР ТС 012/2011.

LCIE

ATTESTATION D'EXAMEN UE DE TYPE EU TYPE EXAMINATION CERTIFICATE

1 Version : 07

LCIE 08 ATEX 6102 X

Issue : 07

Directive 2014/34/UE

2 Appareil ou Système de Protection destiné à être utilisé en Atmosphères Explosibles

Equipment or Protective System Intended for use in Potentially Explosive Atmospheres

3 Produit :
Capteur de pression haute température

Product :
High temperature pressure transducer

Type: 176XYY/MZZZ-AA series

4 Fabricant :

Manufacturer :

PCB Piezotronics Inc.

5 Adresse :

Address :

3425 Walden Avenue
Depew, New York 14043 USA

6 Ce produit et ses variantes éventuelles acceptées sont décrits dans l'annexe de la présente attestation et dans les documents descriptifs cités en référence.

This product and any acceptable variations thereto are specified in the schedule to this certificate and the documents therein referred to.

7 Le LCIE, Organisme Notifié sous la référence 0081 conformément à l'article 17 de la directive 2014/34/UE du Parlement européen et du Conseil du 26 février 2014, certifie que ce produit est conforme aux Exigences Essentielles de Sécurité et de Santé pour la conception et la construction de produits destinés à être utilisés en atmosphères explosibles, données dans l'annexe II de la Directive.
Accréditation Cofrac Certification de Produits et Services, n°5-0014. Portée disponible sur www.cofrac.fr.

LCIE, Notified Body number 0081 in accordance with article 17 of the Directive 2014/34/EU of the European Parliament and the Council of 26 February 2014 certifies that product has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of products intended for use in potentially explosive atmospheres, given in Annex II to the Directive.
Cofrac Accreditation Product and Services Certification n°5-0014. Scope available on www.cofrac.fr.

Les résultats des vérifications et essais figurent dans le(s) rapport(s) confidentiel(s) N° :

The examination and test results are recorded in confidential report(s) N°:

84489/575164, 88358/579638/1, 114468-627759-1, 124381-650043, 134494-670162, 142170-686669, 14474569-777120-M3

8 Le respect des Exigences Essentielles de Sécurité et de Santé est assuré par la conformité à :

Compliance with the Essential Health and Safety Requirements has been assured by compliance with :

EN IEC 60079-0:2018
EN 60079-11:2012

9 Le signe « X » lorsqu'il est placé à la suite du numéro de l'attestation, indique que cet appareil est soumis aux conditions particulières d'utilisation, mentionnées dans l'annexe de cette attestation.

If the sign "X" is placed after the certificate number, it indicates that the product is subject to the Specific Conditions of Use specified in the schedule to this certificate.

10 Cette Attestation d'Examen UE de Type concerne uniquement la conception et la construction du produit spécifié.
Des exigences supplémentaires de la directive sont applicables pour la fabrication et la fourniture du produit. Ces dernières ne sont pas couvertes par la présente attestation.

This EU Type Examination Certificate relates only to the design and construction of the specified product.
Further requirements of the Directive apply to the manufacturing process and supply of this product. These are not covered by this certificate.

11 Le marquage du produit est mentionné dans l'annexe de cette attestation.

The marking of the product is specified in the schedule to this certificate.

Fontenay-aux-Roses, le 13 décembre 2022

12 DESCRIPTION DU PRODUIT

Le capteur est composé d'une enveloppe métallique hermétiquement scellée contenant un ensemble piézo-cristal et connecté à un câble intégré (longueur maximale 61m).

DETAIL DE LA GAMME

X = A à Z code de la famille
YY = 01 à 99, pour indiquer le montage, le câblage, le diaphragme ou le connecteur
M = option pour indiquer la longueur métrique du câble
ZZZ = 001 à 999, en option pour indiquer la longueur métrique ($\leq 61m$) ou en pied (≤ 200 pieds) du câble
AA = 01 à 99, en option pour indiquer la longueur du câble en pouces ou en centimètres

CARACTERISTIQUES

U_i : 30V, I_i : 300mA, P_i : 1W, C_i : 5nF, L_i : 0,3mH

MARQUAGE

Le marquage du produit doit comprendre :

PCB Piezotronics Inc.
Adresse : ...
Type : 176XYY/MZZZ-AA series
N° de fabrication : ...
Année de fabrication : ...
Ⓜ II 1 G
Ex ia IIC T6...T770°C* Ga
*Voir classement en température
LCIE 08 ATEX 6102 X
 U_i : 30V, I_i : 300mA, P_i : 1W, C_i : 5nF, L_i : 0,3mH

Marquage réduit :

PCB
Type : 176XYY/MZZZ-AA series
N° de fabrication : ...
Année de fabrication : ...
Ⓜ II 1 G
Ex ia IIC T6...T770°C* Ga
LCIE 08 ATEX 6102 X

L'appareil doit également comporter le marquage normalement prévu par les normes de construction qui le concernent sous la responsabilité du fabricant.

13 CONDITIONS PARTICULIERES D'UTILISATION

- a. L'appareil ne peut être raccordé qu'à un matériel certifié de sécurité intrinsèque. Cette association doit être conforme vis-à-vis de la sécurité intrinsèque (voir les paramètres électriques au paragraphe 12).

Seul le texte en français peut engager la responsabilité du LCIE. Ce document ne peut être reproduit que dans son intégralité, sans aucune modification. Il est établi en accord avec le [référentiel de certification ATEX](#) du LCIE. *The LCIE's liability applies only on the French text. This document may only be reproduced in its entirety and without any change. It is issued in accordance with LCIE's [ATEX Certification Rules](#).*
CERT-ATEX-FORM 04 Rev. 06

DESCRIPTION OF PRODUCT

The sensor is made of a hermetically sealed metal housing containing only a piezo-crystal assembly connected to an integral cable (maximum length 61m).

RANGE DETAILS

X = A to Z for family code
YY = 01 to 99 for indicate mounting, diaphragm, cabling or connector variations
M = optional to indicate metric cable length
ZZZ = 001 to 999 is optional to indicate cable length in feet (≤ 200 feet) or meters ($\leq 61m$)
AA = 01 to 99 is optional to indicate fractional length of cable in inches or centimeters

RATINGS

U_i : 30V, I_i : 300mA, P_i : 1W, C_i : 5nF, L_i : 0,3mH

MARKING

The marking of the product shall include the following :

PCB Piezotronics Inc.
Address :
Type : 176XYY/MZZZ-AA series
Serial number : ...
Year of construction : ...
Ⓜ II 1 G
Ex ia IIC T6...T770°C* Ga
*See Temperature classification
LCIE 08 ATEX 6102 X
 U_i : 30V, I_i : 300mA, P_i : 1W, C_i : 5nF, L_i : 0,3mH

Reduced marking :

PCB
Type : 176XYY/MZZZ-AA series
Serial number : ...
Year of construction : ...
Ⓜ II 1 G
Ex ia IIC T6...T770°C* Ga
LCIE 08 ATEX 6102 X

The equipment shall also bear the usual marking required by the product standards applying to such equipment under the manufacturer responsibility.

SPECIFIC CONDITIONS OF USE

The apparatus can be only connected to certified intrinsically safe equipment. This combination must be compatible as regards intrinsic safety rules (see electric parameters clause 12).

1 Version : 07

LCIE 08 ATEX 6102 X

Issue : 07

b. Le montage du produit dans une installation doit être effectué de telle sorte que le corps métallique du capteur et le blindage du câble soient reliés de manière fiable à la terre du système.

The mounting of the apparatus into an installation must be carried out in such a way that metallic body of the sensor and cable shield are reliably connected to the system earth.

c. L'équipement doit être monté de manière à ce qu'il ne soit pas soumis à des chocs mécaniques sur le capteur.

The equipment must be mounted in such a way that it is not subjected to mechanical shocks on the sensor.

Classement en température / <i>Temperature classification</i>	Température ambiante / <i>Ambient temperature</i>
T6	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +80^{\circ}\text{C}$
T5	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +95^{\circ}\text{C}$
T4	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +130^{\circ}\text{C}$
T3	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +195^{\circ}\text{C}$
T2	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +290^{\circ}\text{C}$
T1	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +440^{\circ}\text{C}$
T530°C	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +520^{\circ}\text{C}$
T660°C	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +650^{\circ}\text{C}$
T770°C	$-70^{\circ}\text{C} \leq T_{\text{amb}} \leq +760^{\circ}\text{C}$

14 EXIGENCES ESSENTIELLES DE SANTE ET DE SECURITE

ESSENTIAL HEALTH AND SAFETY REQUIREMENTS

Couvertes par les normes listées au point 8.

Covered by standards listed at 8.

1 Version : 07

LCIE 08 ATEX 6102 X

Issue : 07

Version 04:
29/07/2015

- Mise à jour normative selon la norme EN 60079-0:2012 + A11:2013.
- Modification de l'élément piézo-électrique.
- Modification du marquage pour la classification de température.
- Modification de la classification de la température dans la clause «Conditions spéciales pour une utilisation sûre».

Issue 04:
2015/07/29

- Normative update according to EN 60079-0:2012 + A11:2013 standard.
- Modification of the piezoelectric element.
- Modification of the marking for the temperature classification.
- Modification of the temperature classification in the clause "Special conditions for safe use".

Version 05:
21/02/2017

Mise à jour de la température ambiante inférieure de 0°C à -70°C.

Issue 05:
2017/02/21

Update of the lower ambient temperature from 0°C to -70°C.

Version 06:
09/11/2022

- Extension de la gamme de température de la série 176 pour inclure jusqu'à $T_a \leq 760^\circ\text{C}$ T770°C.
- Ajout d'une variante avec option de connecteur intégré (au lieu du câble).
- Mise à jour normative selon la norme EN IEC 60079-0:2018.
- Modification des paramètres SI.

Issue 06:
2022/11/09

- Expansion of the Temperature range of the 176 Series to include up to $T_a \leq 760^\circ\text{C}$ T770°C.
- Adding a variation with integral connector option (instead of cable).
- Normative update according to EN IEC 60079-0:2018.
- Modification of IS parameters.

Version 07 : Correction éditoriale (numéro de l'attestation).

Issue 07: Editorial correction (certificate number).
