USE OF MODEL 378A12

Model 378A12 is a 1/4 in (6 mm) prepolarized microphone and preamplifier system. Model 378A12's 182 dB, 3% distortion rating, and 194 dB maximum before clipping specification, makes it a perfect sensor for very high amplitude measurements.

Pressure field response microphones are typically intended to be used in small closed couplers, confined spaces, or flush mounted to hard reflective surfaces.

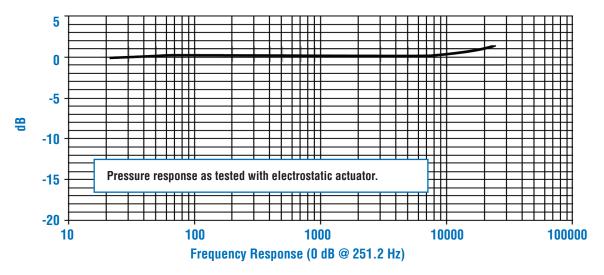

POLARIZATION VOLTAGE – ICP® (OV) PREPOLARIZED

PCB® is the inventor of ICP® sensor power technology. All manufacturers of IEC 61094-4 compliant prepolarized (0V) microphones use the technology that PCB developed. Prepolarized microphones operate on 2-20 mA constant current supply and use coaxial cables resulting in significant per channel cost savings over the PCB 200V models. Other ICP® compatible sensors such as accelerometers, force, strain, and pressure sensors use the same power supplies and cables as prepolarized microphones, further reducing set-up time and initial investment costs.
