RE: PFAS in PCB products

Dear Valued Customer;

PCB Piezotronics is aware of regulations that will result in PFAS being restricted in the near future. This is a change that will have significant impact on many industries, PCB Piezotronics included. We are currently working to identify all PFAS chemicals in our products. It is anticipated that many of our products may be affected by PFAS restrictions.

Specifically, we are investigating the use of fluoroplastic powder, polytetrafluoroethylene materials, per- and polyfluorinated substances used in plastics and other components which may contain PFAS chemicals. We are analyzing and reviewing if suitable replacements are on the market. There are currently some items in our products that have no PFAS free replacement on the market. PCB is working diligently on this project, and have requested exemptions. We understand the need for answers as soon as possible. Unfortunately, due to the widespread applications of PFAS and PCB's extensive product lines, this will be a time-consuming process. If there are any questions, please do not hesitate to ask.

Thank You,

Wendy Willard
Regulatory Affairs and Product Certification Coordinator
